

APR-52

NEXT MEETING: Cassidy School, E. entrance between 66th & 65th on Lansdown, West Philly.

DATE: May 5, 1952 at 2000

NET CONTROL: First car to arrive.

SPEAKER — AUCTION: W3QQH will speak on noise limiting in mobile receivers. The boys have been crowing for an auction so this is it. Dig down in the ole barrel and bring up some of the junk. 3MXP has a load to sell. PXY has a scope and 400 volt power supply. Milt Conner has a Stancor 203A & Carter Dynamotor etc. Don't forget to bring some of that green stuff too!

REFRESHMENTS AND DOOR PRIZES.

VISITORS TO THE LAST MEETING: (We don't vouch for the accuracy of this list). QNS, SMD, Miller, WN3TBF, KMH, Arron, WN3SAE, Maul, W0SUZ, Collin, DSG, IRS, Varlier.

AGENDA FOR MUNE: W3QFY promises a band up program. Looks like a demonstration and talk on Du Monts 30 inch TV receiver. A Mobile communications talk is in the wind at a later date.

THIS IS IT: Our March 30 CD demonstration in Chester Co. was certainly a success, 16 cars having participated and covered the entire county. The PHIL-MONT mobile communications trailer was located 5 miles from W. Chester HQ and controlled all the messages to and from communications trailer. Twenty one messages were handled in all, ranging from bombings and fires, to sabat eurs' (same thing as Dodgers only worse). The remote operating net control plan worked very successfully in view of the anticipated QRM: as did single frequency control. On the humorous side of the ledger, no one could coherently explain how QNS wound up transmitting from the center of a HOT ROD race track (in action), compliments of the local constabulary near Oxford, or, whether or not 3EM voted in favor of the street cleaning machine he and the city fathers of Phoenixville saw demonstrated. Sabateurs in Downingtown were trying to singe 3SGR's seat; we heard he pulled out one of his tooth pliers and scared 'em off. PMD says he is getting pretty lonesome for the old fashioned rag chew on the club freq., so has retreated to 75. There is a political movement afoot to guarantee the Vice Presidency to anyone capable of getting Roy to stay up later than 2130. CTT was stopped by special police in Philly because his antenna was only a foot from the trolley wires. MVG wants to know "if there is no ignition noise in your receiver is it working as it should?" (He's complaining) This column is green with envy Arch, as are about 39 other club members. 3VVS is building a crystal controlled receiver to monitor the club freq. The XYL will monitor after 1730. Betcha one stop at the 'Tavern' will detune it! Paul also wants a schematic of Guthman Model U-10 Freq. meter and reports 75 is as far away as a new antenna. 3LJ hopes his mobile rig works as well as the reports from the gang claim. MXP has 838's—400 watts on 75 with no TVI. (Now lets try it with an antenna—). 2NBJ wants to find a 2-3 inch indirectly lighted S meter for his Pontiac speaker grill—he wants to see how strong the QRN is. See MVG Al, you can't measure what you don't have. Wanted by 3HYU for about a buck—a gadget to kill all noise in a .49 Chevy so he can hear something besides KZ5's. EM is looking for a 10 meter ground plane. Someone accused Brad of driving a Master Mount "shock absorber". (couldn't pass up that choise bit Brad). 3BS needs info on how to put a TBS50 on 75 mobile. PXY's a wrestlin it now. 3QFY wants high joltage components—plate xfmr, coil, condensers etc. He will swap a Kodak Retina 35mm, F3.5 and a Sky rider 5-10. EM requests help in Bucks Co. Doylestown is having a CD Drill and needs an assist on May 4th, at 1400. This replaces our usual monthly drill. Maybe we can talk 3MFY into piloting the Aero Mobile Wagon for us in the absence of 3KCG. Seems Bruce couldn't even see the top line of the eye exam chart for his pilots physical—which 'shows to go' you don't have to see to eat! Hey Pres, can I fly right hand seat? KCG. Incidentally next committee meeting is at KCG's on May 15th. Head out Germantown Pike towards Plymouth Valley and get on the air. (Near QFY's). All club members are urged to attend these meetings to form club policy. If something cooks within the club that irks you, air your ideas at these meetings. HYU is sponsoring a noise elimination information bible to contain all noise elimination information indexed by make of car. This is the pitch—write down what make car you have or had, steps you have taken to eliminate noise in it, whether successful or not and pass the dope on to Al. This dope is your ticket to the next meeting. We think this a rite fine gesture on Al's part and want to get behind it and push. Be sure to indicate the model cars you have had experience with and the steps taken. It is important that you indicate the gadget that didn't work too. Al will compile all the info, print it and distribute it to everyone interested—member or not. Our special events chairman 3MFC is about to get into high gear for the summer

outings. Arch lined up our outing last year as you may know. First outing June 8th at Washington's Crossing, Main Pavilion. (Alternate date the following week in case of rain; June 15, Valley Forge Park). Second outing Aug. 17th. (Alternate date Aug 24th). Suggestions are requested for good locations. PXY's kite is available again this year but bring your own wind. QFY has a bug in his bonnett about a balloon to carry that antenna aloft in case there is no hot air (fat chance wid dis mob). Who has a balloon or some ideas on the subject? 3BJA has been conspicuously absent—guess Frank don't like us any mo. Has anyone met 3EXY's XYL? We must pass approval, Harold, on all our YL's. (Pity the poor gal—Harold is a psychologist!). The club voted 9 to 4 in favor of 40 meter phone, there being about 10 abstentions. This months CQ magazine is exclusively mobile—a reading must for the club. Milt Conner, has a raft of stuff to sell: BC-779 (Super Pro ARC 5 7-9, LM Freq. Meter, Bendix Facto Meter, VFO wid 3.5 Mc output, Collins 4A etc. Phone Mayfair 4-6277. The dates for the first outing were pushed ahead tentatively to avoid interference with Field Day. The original dates planned were June 22 and June 29. Quite a few are interested in Field Day this year. We need power sources badly. More on this later. Remember to bring your noise elimination comments to the meeting.
